

Figure S4

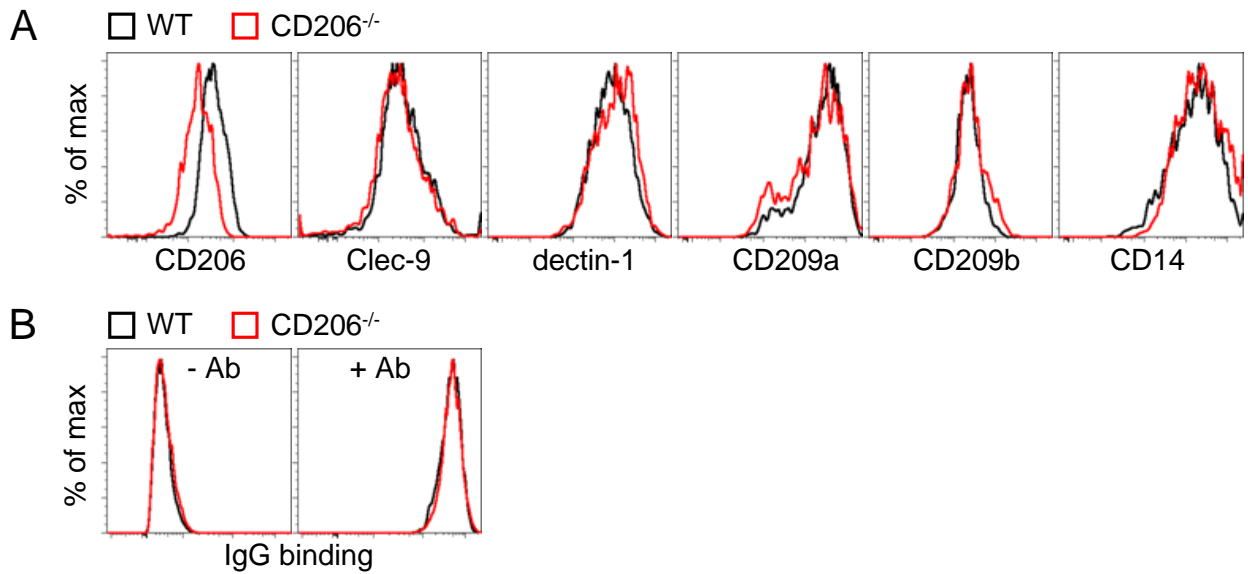

Fig. S4. Mannose receptor (CD206) alone is not responsible for Ig binding.

(A) BMDC from WT and MR-deficient mice after LPS-induced maturation were analyzed for surface expression of indicated CLR. **(B)** BMDC from WT and MR-deficient mice were incubated with Fab fragments generated from rat anti-mouse CD16/32 IgG and further tested for their ability to bind mouse IgG conjugated with PE. Representative data are shown.
